

## IHSA's Recent Technical Advisories

Recently the Infrastructure Health and Safety Association (IHSA) in partnership with IHSA's Labour-Management Network published four Technical Advisories. The Electrical Safety Authority was included in the development of the application of powerline covers.

1. [Technical Advisory: W806: Overhead powerline covers \(Electrical utility workers and their employers\)](#)
  - Provides information to the Utilities on the application of using the powerline covers.
2. [Technical Advisory: W807: Overhead powerline covers \(Non-utility workers and their employers\)](#)
  - Provides information to the Utilities on the application of powerline covers when installing for non-utility workers.
3. [Technical Advisory: W808: Radio and microwave collector/repeaters on utility poles](#)
  - Outlines precautions to ensure workers performing work on or near utility poles where radio and microwave frequency collectors or repeaters are installed.
4. [Technical Advisory: W809: Induced voltage while working in proximity to cell towers emitting radio frequencies](#)
  - Outlines precautions to ensure workers performing work in proximity to cell towers emitting radio frequency.
